

OPENSIFT MEETUP

ROMA

Application Lifecycle Management with OpenShift

OPENSIFT MEETUP ROMA
04th March 2019

Maurizio Romani - Consultant @ RedHat
Stefano Linguerri - Architect @ RedHat

15 min

CONFIGURATION AS CODE

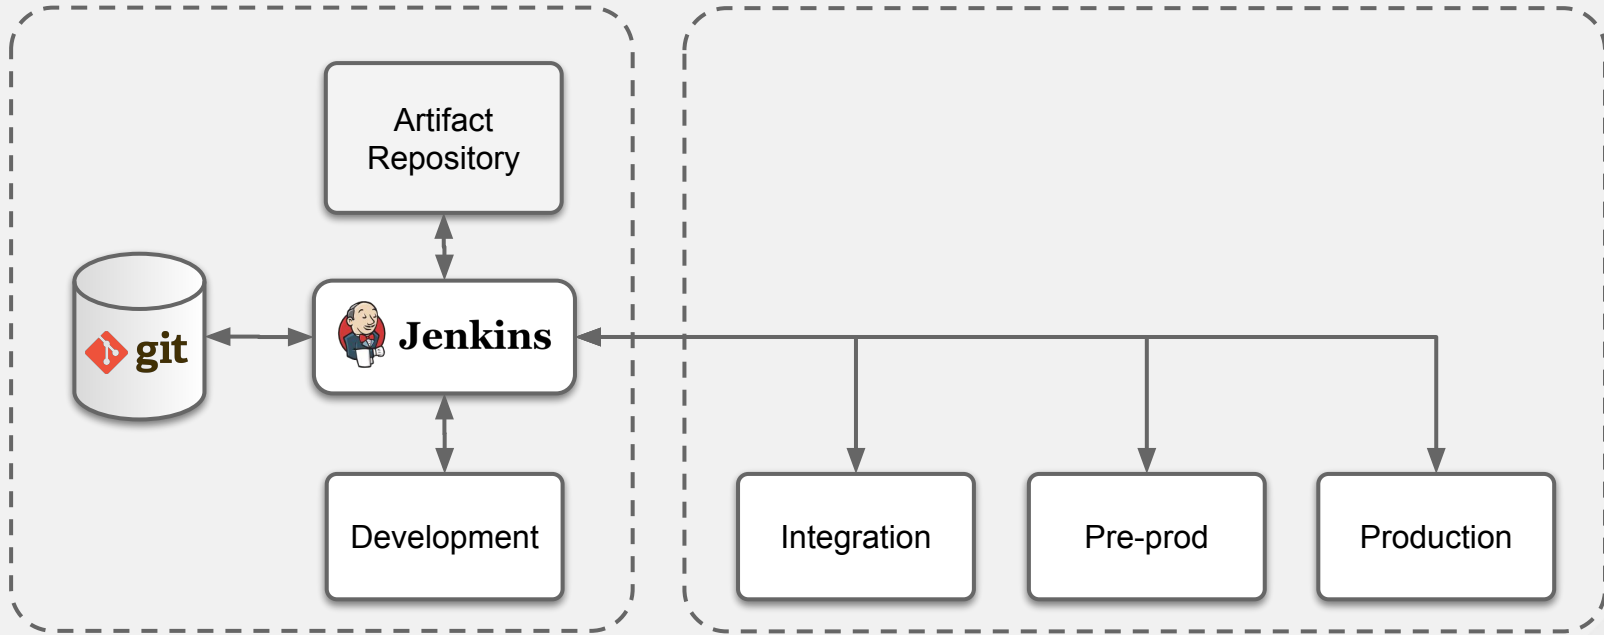

A core concept is that the container is agnostic with respect to configuration.

All the relevant configurations that point other services (3rd party service, Web service etc. etc.) and persistence services (eg, RDBMS) have to be provided as external configurations, and must not be baked into container.

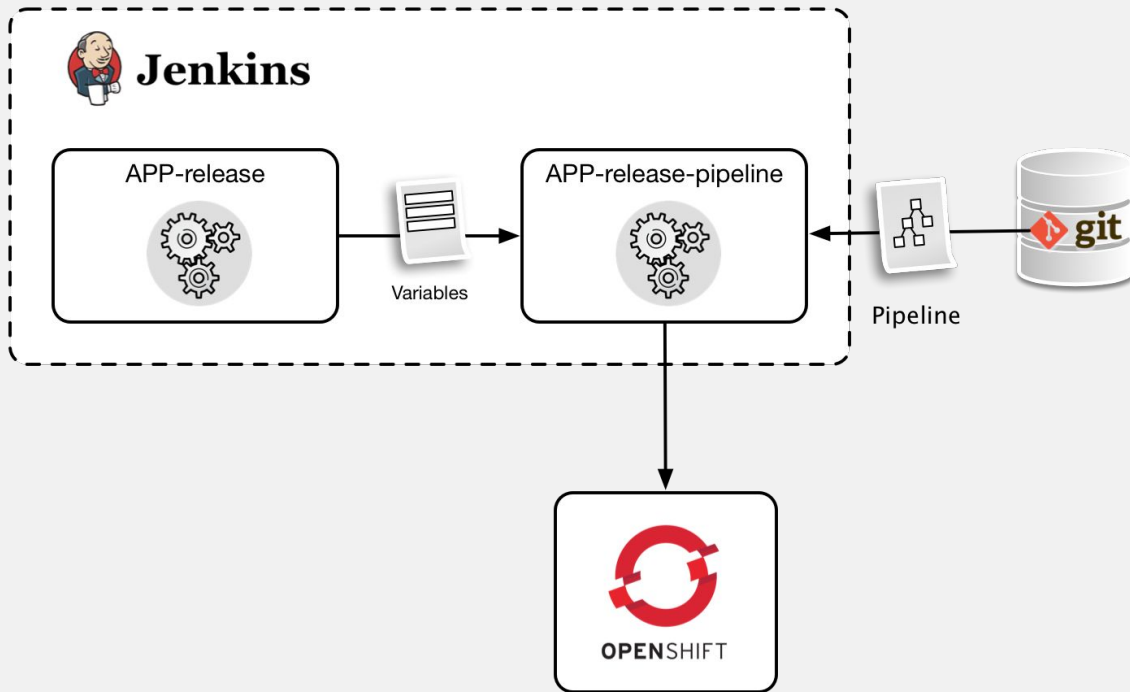

Every configuration, including the application deployment strategy and execution strategy should be managed through declarative config files and managed with automation processes.

This addresses the whole configuration management, and in the phase of definition will cover the security aspect of information segregation

Deal with environments

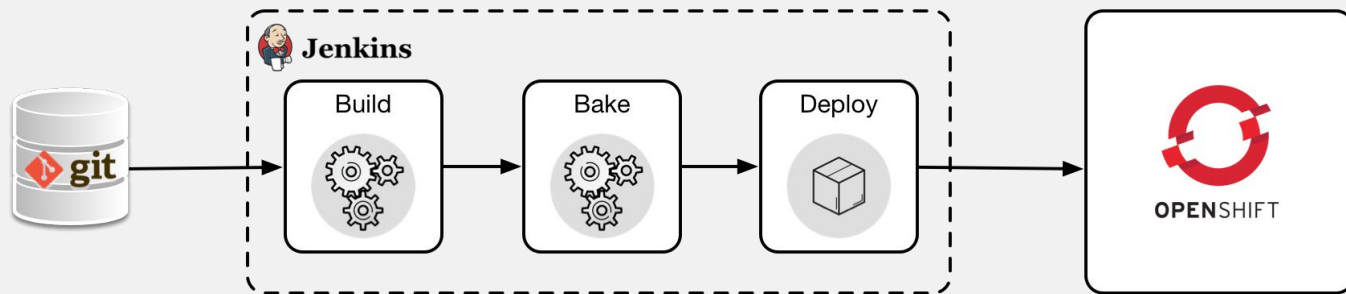

Jenkins Jobs

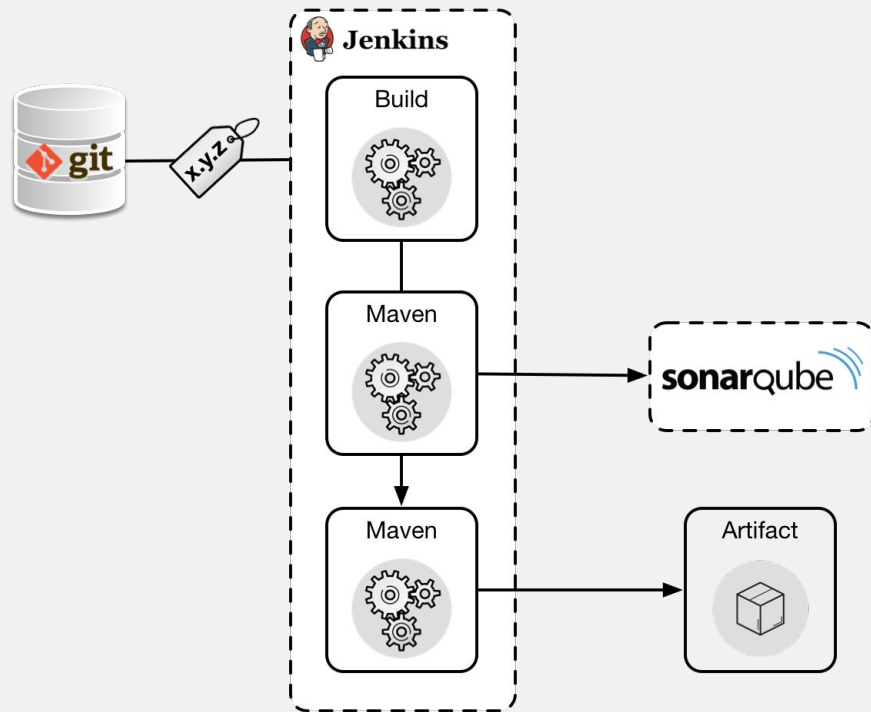

Release phases

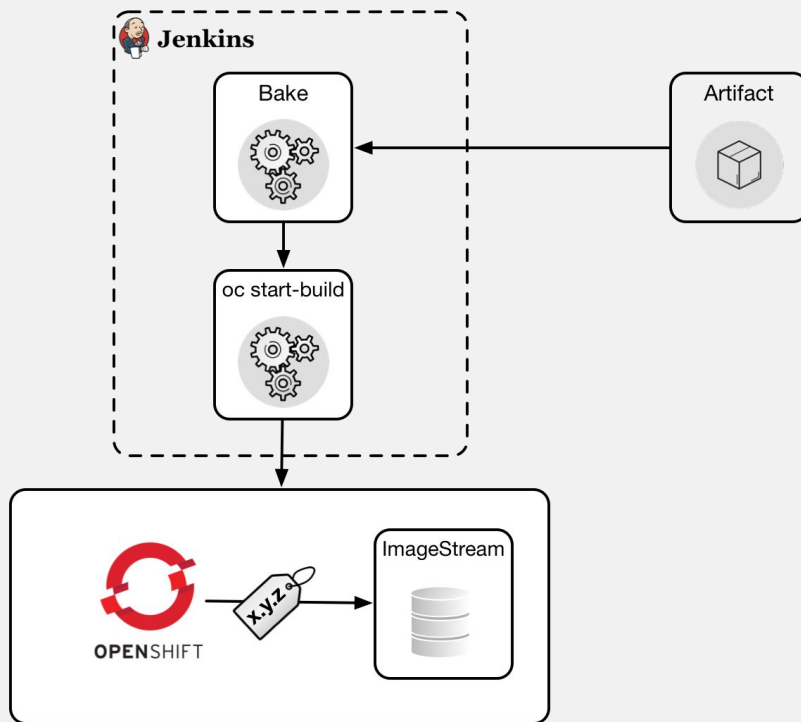

Phases

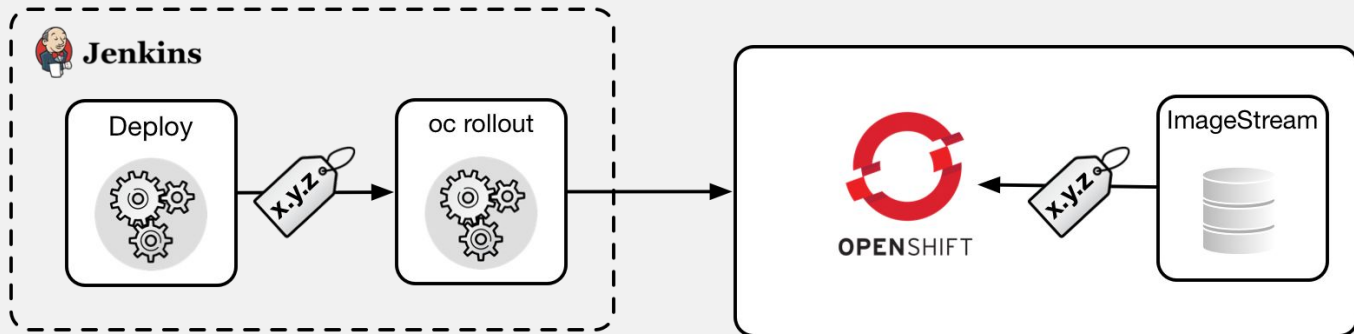

Phases: Build

Phases: Bake

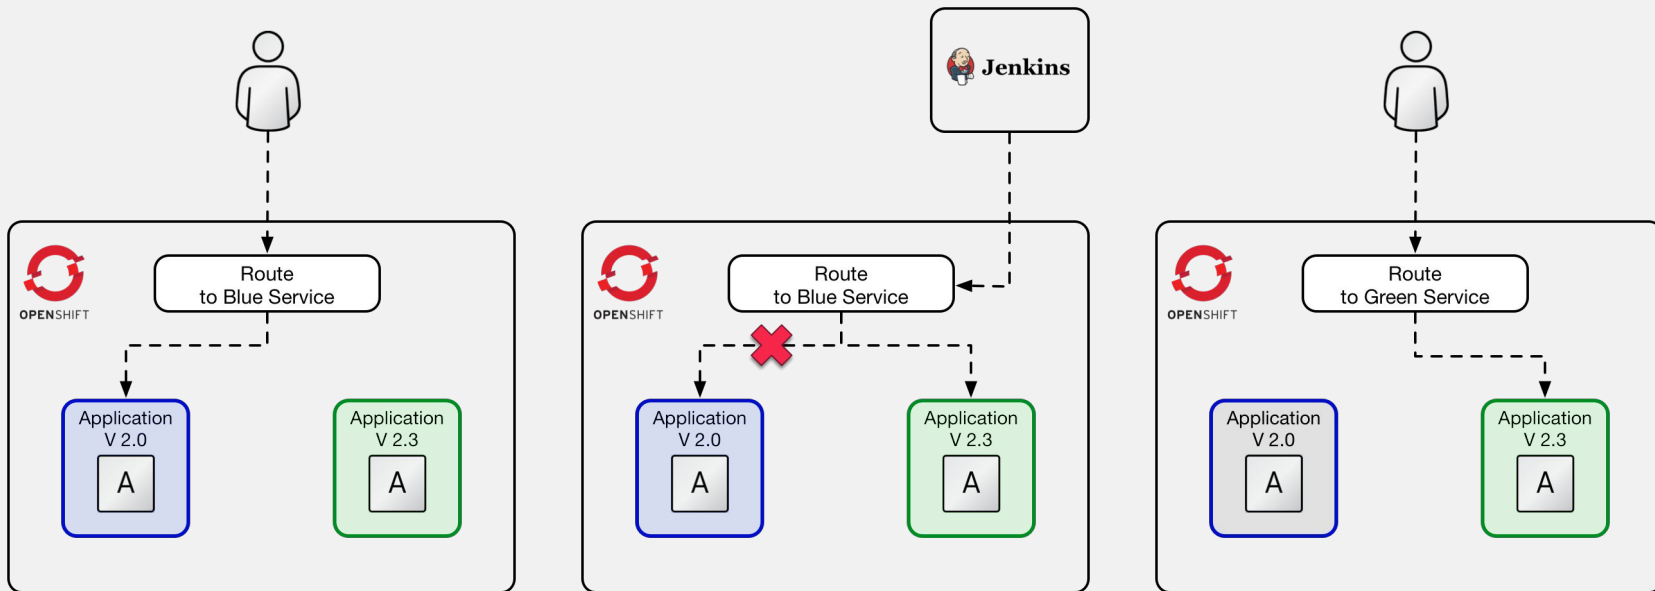

Phases: deploy

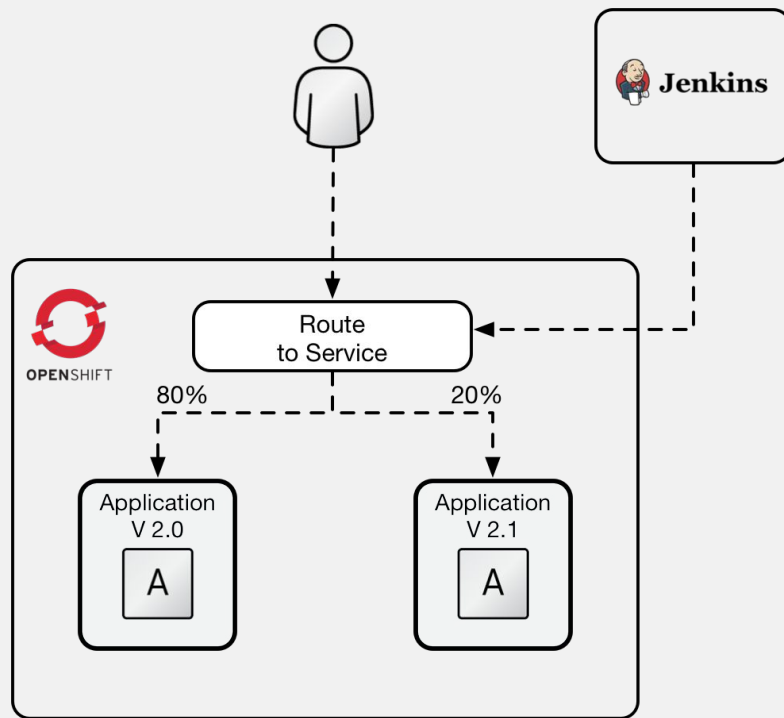

Rollout strategies

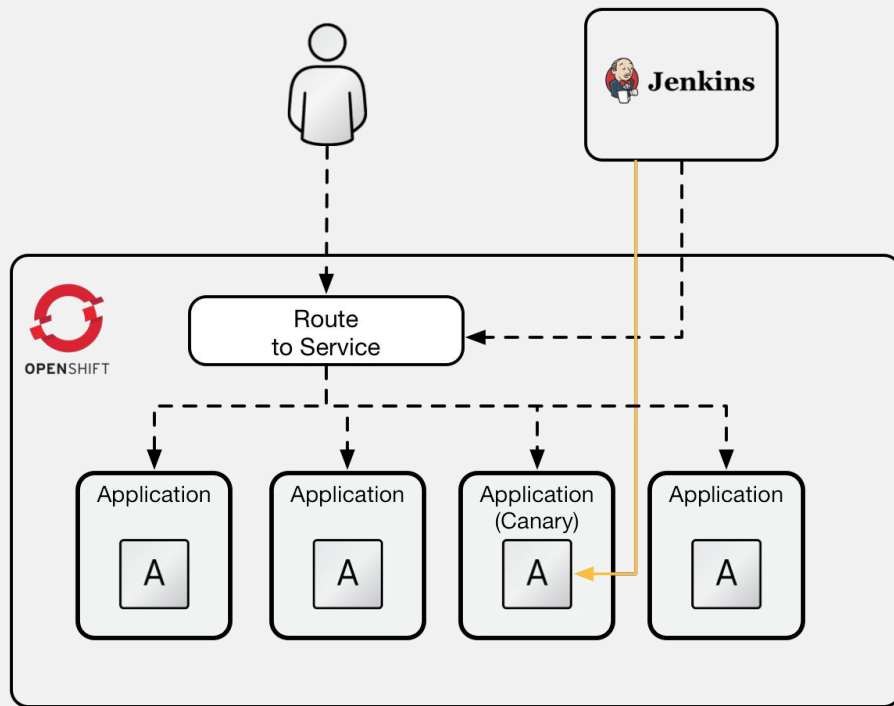

Rollout: Blue Green

Rollout: A/B

Rollout: Canary
